

## Reviewer Comments

### Reviewer Note

#### **Terrific Job!**

You have made use of drop-down to make the P&L statement and it gives the correct results for each Ticker symbol. You have used the correct mapping to pick the revenue and other costs.

**Forecast Dashboard** also looks very good. You have added a drop-down in this dashboard as well which gives an added advantage to choose from the different companies. **Well Done!**

This section was the most challenging and important one and you have simply nailed it.

### Reviewer Note

You have calculated the summary statistics accurately and have written the insights using these statistics very appropriately. **Nice Work!** Central tendency and measure of spread tell a lot about the data and it is good to look at both of them in conjunction to get a better understanding of the dataset. You have clearly shown your expertise to look at these important concepts while explaining your insights.

### Reviewer Note

**Excellent work** in your use of INDEX and MATCH statements. It helped you in creating a dynamic dashboard for the Profit and loss statement and Forecasting.
